

## **Post Implementation Evaluation Report**

### **Access Permit Database – Transportation**

Project Dates: 7/1999 through 9/2003

Project Cost: \$373,122

#### Project Objectives

The vision for the project was “To automate the Highway Entrance Permit approval process, improving the accuracy, currency, and completeness of the statewide highway entrance inventory.” The following outlines the project objectives:

- Improve the efficiency and accuracy of permit processing, review, and approval.
- Improve institutional memory and limit state liability for crashes by assembling and maintaining a complete inventory of all approved entrances.
- Improve state defensibility over permit denials by virtue of a better documented permit approval and administration process.
- Assure the ability of the system to evolve to include other permit types.
- Streamline the permit analysis process through the expended use of technology and data integration.
